

# **New national accounts tables**

## **Introducing NACE A60 breakdown, removing NACE A17**

The national accounts data section has been extended with [new tables](#) showing the A60 NACE breakdown. The new tables can be found under the heading National Accounts detailed breakdowns in the annual accounts branch of the online database tree.

The revised ESA95 Transmission Programme entered into force in December 2007. Accordingly, Member States are now obliged to transmit the A60 breakdown with a delay of t+21 months. The A31 breakdown is to be transmitted at t+9 months.

With the revised Transmission Programme, the A17 breakdown is no longer requested from the Member States (with the exception of tables cross classifying gross fixed capital formation/fixed assets by industry and by asset). The A17 tables are therefore removed from the online database's section of annual national accounts aggregates and employment by branch.

The A60 breakdown is presented online for the following variables:

- Consumption of fixed capital
- Output
- Intermediate consumption
- Gross value added
- Compensation of employees
- Gross wages and salaries
- Net operating surplus and net mixed income
- Other taxes less subsidies on production
- Total employment
- Employees
- Self-employed
